:Optimized supplier management

The objective of supplier management optimization is to use automated data collection and processing to increase process efficiency and performance across the entire supply chain.

The resulting standardization and the automation of the procurement process, along with the introduction of catalogue management and the automation of supplier evaluation, will further improve efficiency.

The automated data collection with its central point of access to supplier information will allow you to better prepare for supplier negotiations.

Labor-intensive and error-prone process steps are automated and accelerated. This will give you an information advantage that allows you to negotiate more effectively with suppliers and to benefit from better purchasing conditions.

You can also use the information gathered to objectively evaluate the performance of your suppliers and to further improve it.

REALTECH Business Solutions

Optimized supplier management

:Your advantages

Increased efficiency and greater productivity through

- "Just-in-time information"
- Automated supplier benchmarking
- Timely recognition of supply bottlenecks
- Facilitated procurement through access to a supplier's performance indicators and the supplier catalogue
- Less time spent collecting and interpreting data

:An overview of our services

- Potential analysis and identification of optimization opportunities
- Assessment of productivity, ROI, TCO, and costs
- Implementation of the proposed business solutions

The REALTECH BCI Four Phase Model safeguards the efficient implementation of your business processes — from initial analysis to final implementation.
